NOTE

Units of Measurement

As for the previous Congresses and though some authors do not fully agree, we attempt to follow the recommendations of the International System of Units (SI).

For example, hm^3 and km^3 were preferred to 10^6 and 10^9 m^3 , or million and billion cu.m. See Bulletin 34 "ICOLD Guide for the International System of Units (SI)", page 13.

The decimal sign may be the full stop (Anglo-Saxon usage) or the comma (European usage); but as a safeguard against confusion, full stop (period) and comma are used as decimal sign only.

Where the number of digits before or after the decimal sign exceeds three, the digit should be divided into groups of three by half space.

We meet not enough co-operation from some authors writing in English who go on keeping the comma to separate the groups of three digits instead of using half space. It was not possible to make the appropriate corrections in all the tables provided by the authors and even in the text. Sorry for the inconvenience.

AVERTISSEMENT

Unités de Mesure

Comme pour les Congrès précédents et bien que certains auteurs manifestent des réticences à ce sujet, on s'est efforcé de suivre les recommandations du Système International d'Unités (SI).

Par exemple, on a utilisé plus volontiers hm^3 et km^3 au lieu de 10^6 m^3 et 10^9 m^3 ou million et milliard de mètres cubes. Voir Bulletin 34 « Guide CIGB du Système International d'Unités (SI) », page 13.

De même, on a retenu le point (usage anglo-saxon) et la virgule (usage européen) comme signe décimal, mais pour éviter toute confusion, la virgule et le point ne sont utilisés que comme signe décimal.

Aussi, quand le nombre de chiffres avant ou après la virgule est supérieur à 3, les chiffres sont groupés par 3, chaque groupe étant séparé par un court espace.

A ce sujet nous rencontrons encore des difficultés de la part de quelques auteurs de langue anglaise qui continuent à utiliser la virgule au lieu d'un court espace pour séparer les groupes de trois chiffres. Nous n'avons pas pu apporter les corrections nécessaires dans tous les tableaux fournis par les auteurs et même dans le texte. On voudra bien nous en excuser.

Table des Matières des Communications	589

The first part of the report deals with the general situation of the country, and the progress of the war. It is a very interesting and valuable document, and one which should be read by every citizen of the United States. The author has done a very good job of summarizing the events of the year, and has given a very clear and concise account of the progress of the war.

The second part of the report deals with the financial situation of the country, and the progress of the war. It is a very interesting and valuable document, and one which should be read by every citizen of the United States. The author has done a very good job of summarizing the events of the year, and has given a very clear and concise account of the progress of the war.

The third part of the report deals with the military situation of the country, and the progress of the war. It is a very interesting and valuable document, and one which should be read by every citizen of the United States. The author has done a very good job of summarizing the events of the year, and has given a very clear and concise account of the progress of the war.

The fourth part of the report deals with the political situation of the country, and the progress of the war. It is a very interesting and valuable document, and one which should be read by every citizen of the United States. The author has done a very good job of summarizing the events of the year, and has given a very clear and concise account of the progress of the war.

The fifth part of the report deals with the social situation of the country, and the progress of the war. It is a very interesting and valuable document, and one which should be read by every citizen of the United States. The author has done a very good job of summarizing the events of the year, and has given a very clear and concise account of the progress of the war.

The sixth part of the report deals with the economic situation of the country, and the progress of the war. It is a very interesting and valuable document, and one which should be read by every citizen of the United States. The author has done a very good job of summarizing the events of the year, and has given a very clear and concise account of the progress of the war.

The seventh part of the report deals with the foreign situation of the country, and the progress of the war. It is a very interesting and valuable document, and one which should be read by every citizen of the United States. The author has done a very good job of summarizing the events of the year, and has given a very clear and concise account of the progress of the war.

The eighth part of the report deals with the internal situation of the country, and the progress of the war. It is a very interesting and valuable document, and one which should be read by every citizen of the United States. The author has done a very good job of summarizing the events of the year, and has given a very clear and concise account of the progress of the war.

The ninth part of the report deals with the future of the country, and the progress of the war. It is a very interesting and valuable document, and one which should be read by every citizen of the United States. The author has done a very good job of summarizing the events of the year, and has given a very clear and concise account of the progress of the war.

PAPERS ON Q 67

RAPPORTS SUR LA Q 67

QUESTION

67

**New developments for fill dams
and fill cofferdams**

Subject

- a)* Design and construction consideration of low quality fill materials and impact of extreme weather conditions.
- b)* New use of man-made materials for reinforcement and drainage, excluding impervious elements.
- c)* Design for overtopping and flow-through.
- d)* Special problems with fill dams in narrow valleys.

**Progrès récents concernant les barrages
et batardeaux en remblai**

Objet

- a)* Prise en compte de la qualité médiocre des matériaux de remblai au stade du projet et lors de la construction, et impact de conditions climatiques très sévères.
- b)* Utilisation nouvelle de matériaux artificiels pour le renforcement des ouvrages et le drainage, à l'exclusion des dispositifs d'étanchéité.
- c)* Conception des barrages en vue du déversement et de l'écoulement à travers le remblai.
- d)* Problèmes particuliers posés par les barrages en remblai dans les vallées étroites.
