PRESENTATION

The papers presented during the Symposium were published in two volumes, I and II, for Questions A and B respectively and given to the participants when they registered. In them the publication of a third volume was announced, to be published later, where the General Speeches, the interventions of the Presidents and the Experts and the oral interventions during the discussions would appear.

During the sessions the members who intervened presented a short draft of their speeches or papers. This volume compiles all the original texts in their whole length. The remaining interventions are published in their oral version.

The Spanish Committee provided simultaneous interpretation so that the speeches could be delivered in the language the speakers preferred but they were told that all the written documents were in English. Therefore, volume III includes two kinds of texts: papers or speeches in English and the translations of those which were given or delivered in the other two languages. Several speakers used overhead transparencies or slides (marked "N") and one of them (Mr. Castro from Mexico) an interesting video. Obviously, this visual information is not included here.

The Technical Committee expresses its thanks to the members of the tables and to the participants in the discussions for their interventions. They all contributed to a high level of interest in the Symposium, proven by the fact that the conference room, with a capacity for 560 people, was practically full throughout the sessions.

The Technical Committee

INTRODUCTION

The first of the two volumes of the present work was published in the summer of 1964. It contained the results of the first year of the project, which then continued in the second volume, published in the summer of 1965. The present volume, which is the third of the series, contains the results of the third year of the project, which then continued in the fourth volume, published in the summer of 1966.

The present volume contains the results of the third year of the project, which then continued in the fourth volume, published in the summer of 1966. The present volume contains the results of the third year of the project, which then continued in the fourth volume, published in the summer of 1966.
