ABOUT THE AUTHORS	xix
CHAPTER 1 INTRODUCTION	1
1.1 Outline of the book	1
1.2 Types of embankment dams and their main features	1
1.3 Types of concrete dams and their main features	8
CHAPTER 2 KEY GEOLOGICAL ISSUES	9
2.1 Basic definitions	9
2.2 Types of anisotropic fabrics	10
2.3 Defects in rock masses	10
2.3.1 Joints	10
2.3.2 Sheared and crushed zones (faults)	12
2.3.3 Soil infill seams (or just infill seams)	12
2.3.4 Extremely weathered (or altered) seams	12
2.3.5 The importance of using the above terms to describe defects in rock	13
2.4 Defects in soil masses	13
2.5 Stresses in rock masses	14
2.5.1 Probable source of high horizontal stresses	15
2.5.2 Stress relief effects in natural rock exposures	16
2.5.3 Effects in claystones and shales	17
2.5.4 Special effects in valleys	17
2.5.5 Rock movements in excavations	20
2.6 Weathering of rocks	21
2.6.1 Mechanical weathering	21
2.6.2 Chemical decomposition	22
2.6.3 Chemical weathering	22
2.6.4 Weathered rock profiles and their development	25
2.6.5 Complications due to cementation	35
2.7 Chemical alteration	35
2.8 Classification of weathered rock	36
2.8.1 Recommended system for classification of weathered rock substance	37
2.8.2 Limitations on classification systems for weathered rock	39
Rapid weathering	39
2.9.1 Slaking of mudrocks	39
2.9.2 Crystal growth in pores	40
2.9.3 Expansion of secondary minerals	40

2.9.4	Oxidation of sulphide minerals	40
2.9.5	Rapid solution	43
2.9.6	Surface fretting due to electro-static moisture absorption	43
2.10	Landsliding at dam sites	43
2.10.1	First-time and "reactivated" slides	44
2.10.2	Importance of early recognition of evidence of past slope instability at dam sites	45
2.10.3	Dams and landslides: Some experiences	45
2.11	Stability of slopes around storages	59
2.11.1	Vital slope stability questions for the feasibility and site selection stages	61
2.12	Watertightness of storages	68
2.12.1	Models for watertightness of storages in many areas of non-soluble rocks	68
2.12.2	Watertightness of storage areas formed by soluble rocks	70
2.12.3	Features which may form local zones of high leakage, from any storage area	71
2.12.4	Watertightness of storages underlain by soils	71
2.12.5	Assessment of watertightness	72
2.12.6	Methods used to prevent or limit leakages from storages	74
 CHAPTER 3 GEOTECHNICAL QUESTIONS ASSOCIATED WITH VARIOUS GEOLOGICAL ENVIRONMENTS		
3.1	Granitic rocks	77
3.1.1	Fresh granitic rocks, properties and uses	77
3.1.2	Weathered granitic rocks, properties, uses and profiles	77
3.1.3	Stability of slopes in granitic rocks	79
3.1.4	Granitic rocks: check list	79
3.2	Volcanic rocks (intrusive and flow)	79
3.2.1	Intrusive plugs, dykes and sills	79
3.2.2	Flows	81
3.2.3	Alteration of volcanic rocks	84
3.2.4	Weathering of volcanic rocks	85
3.2.5	Landsliding on slopes underlain by weathered basalt	85
3.2.6	Alkali-aggregate reaction	86
3.2.7	Volcanic rocks (Intrusive and flow) check list of questions	86
3.3	Pyroclastics	87
3.3.1	Variability of pyroclastic materials and masses	87
3.3.2	Particular construction issues in pyroclastics	89
3.3.3	Pyroclastic materials – check list of questions	91
3.4	Schistose rocks	91
3.4.1	Properties of fresh schistose rock substances	92
3.4.2	Weathered products and profiles developed in schistose rock	93
3.4.3	Suitability of schistose rocks for use as filter materials, concrete aggregates and pavement materials	94
3.4.4	Suitability of schistose rocks for use as rockfill	94
3.4.5	Structural defects of particular significance in schistose rocks	96
3.4.6	Stability of slopes formed by schistose rocks	98
3.4.7	Schistose rocks – check list of questions	99

3.5	Mudrocks	99
3.5.1	Engineering properties of mudrocks	100
3.5.2	Bedding-surface faults in mudrocks	100
3.5.3	Slickensided joints or fissures	101
3.5.4	Weathered products and profiles in mudrocks	101
3.5.5	Stability of slopes underlain by mudrocks	102
3.5.6	Development of unusually high pore pressures	102
3.5.7	Suitability of mudrocks for use as construction materials	103
3.5.8	Mudrocks – check list of questions	104
3.6	Sandstones and related sedimentary rocks	105
3.6.1	Properties of the rock substances	105
3.6.2	Suitability for use as construction materials	106
3.6.3	Weathering products	106
3.6.4	Weathered profiles, and stability of slopes	107
3.6.5	Sandstones and similar rocks – list of questions	109
3.7	Carbonate rocks	109
3.7.1	Effects of solution	110
3.7.2	Watertightness of dam foundations	114
3.7.3	Potential for sinkholes to develop beneath a dam, reservoir or associated works	117
3.7.4	Potential for continuing dissolution of jointed carbonate rock in dam foundations	119
3.7.5	Potential for continuing dissolution of aggregates of carbonate rock particles, and of permeable carbonate substances (Category O carbonate, in each case)	121
3.7.6	Discussion – potential for continuing dissolution of carbonate rocks in foundations	122
3.7.7	Potential problems with filters' composed of carbonate rocks	124
3.7.8	Suitability of carbonate rocks for embankment materials	127
3.7.9	Suitability of carbonate rocks for concrete and pavement materials	128
3.7.10	Stability of slopes underlain by carbonate rocks	128
3.7.11	Dewatering of excavations in carbonate rocks	129
3.7.12	Carbonate rocks – check list of questions	129
3.8	Evaporites	131
3.8.1	Performance of dams built on rocks containing evaporites	131
3.8.2	Guidelines for dam construction at sites which contain evaporites	132
3.8.3	Evaporites – checklist of questions	133
3.9	Alluvial soils	133
3.9.1	River channel deposits	135
3.9.2	Open-work gravels	135
3.9.3	Oxbow lake deposits	135
3.9.4	Flood plain, lacustrine and estuarine deposits	135
3.9.5	Use of alluvial soils for construction	136
3.9.6	Alluvial soils, list of questions	136
3.10	Colluvial soils	136
3.10.1	Occurrence and description	136
3.10.2	Properties of colluvial soils	138
3.10.3	Use as construction materials	139
3.10.4	Colluvial soil – list of questions	139

3.11	Laterites and lateritic weathering profiles	140
3.11.1	Composition, thicknesses and origin of lateritic weathering profiles	140
3.11.2	Properties of lateritic soils	141
3.11.3	Use of lateritic soils for construction	142
3.11.4	Karstic features developed in laterite terrain	142
3.11.5	Recognition and interpretation of silcrete layer	143
3.11.6	Lateritic soils and profiles – list of questions	143
3.12	Glacial deposits and landforms	143
3.12.1	Glaciated valleys	146
3.12.2	Materials deposited by glaciers	146
3.12.3	Glaciofluvial deposits	153
3.12.4	Periglacial features	155
3.12.5	Glacial environment – list of questions	158
<b>CHAPTER 4 PLANNING, CONDUCTING AND REPORTING OF GEOTECHNICAL INVESTIGATIONS</b>		<b>159</b>
4.1	The need to ask the right questions	159
4.1.1	Geotechnical engineering questions	159
4.1.2	Geological questions	160
4.2	Geotechnical input at various stages of project development	162
4.3	An iterative approach to the investigations	163
4.4	Progression from regional to local studies	164
4.4.1	Broad regional studies	165
4.4.2	Studies at intermediate and detailed scales	165
4.5	Reporting	166
4.6	Funding of geotechnical studies	166
4.7	The site investigation team	167
<b>CHAPTER 5 SITE INVESTIGATION TECHNIQUES</b>		<b>169</b>
5.1	Topographic mapping and survey	169
5.2	Interpretation of satellite images aerial photographs and photographs taken during construction	170
5.2.1	Interpretation of satellite images	170
5.2.2	Interpretation of aerial photographs	170
5.2.3	Photographs taken during construction	173
5.3	Geomorphological mapping	173
5.4	Geotechnical mapping	178
5.4.1	Use of existing maps and reports	178
5.4.2	Geotechnical mapping for the project	178
5.5	Geophysical methods, surface and downhole	180
5.5.1	Surface geophysical methods	181
5.5.2	Downhole logging of boreholes	184
5.5.3	Crosshole and Uphole seismic	186
5.6	Test pits and trenches	186
5.6.1	Test pits	186
5.6.2	Trenches	187
5.7	Sluicing	189
5.8	Adits and shafts	189
5.9	Drill holes	190
5.9.1	Drilling objectives	190

5.9.2	Drilling techniques and their application	190
5.9.3	Auger drilling	194
5.9.4	Percussion drilling	195
5.9.5	Rotary drilling	198
5.10	Sampling	204
5.10.1	Soil samples	204
5.10.2	Rock samples	204
5.11	In situ testing	206
5.11.1	In situ testing in soils	206
5.11.2	In situ testing of rock	211
5.12	Groundwater	211
5.13	In situ permeability tests on soil	214
5.14	In situ permeability tests in rock	215
5.14.1	Lugeon value and equivalent rock mass permeability	215
5.14.2	Test methods	216
5.14.3	Selection of test section	216
5.14.4	Test equipment	217
5.14.5	Test procedure	221
5.14.6	Presentation and interpretation of results	221
5.15	Use of surface survey and borehole inclinometers	223
5.15.1	Surface survey	223
5.15.2	Borehole inclinometers	224
5.16	Common errors and deficiencies in geotechnical investigation	224
 <b>CHAPTER 6 SHEAR STRENGTH, COMPRESSIBILITY AND PERMEABILITY OF EMBANKMENT MATERIALS AND SOIL FOUNDATIONS</b>		 231
6.1	Shear strength of soils	231
6.1.1	Drained strength – definitions	231
6.1.2	Development of drained residual strength $\phi'_R$	232
6.1.3	Undrained strength conditions	235
6.1.4	Laboratory testing for drained strength parameters, and common errors	237
6.1.5	Laboratory testing for undrained strength	248
6.1.6	Estimation of the undrained strength from the over-consolidation ratio (OCR), at rest earth pressure coefficient $K_0$ , and effective stress strengths.	251
6.1.7	Estimation of the undrained strength of cohesive soils from in-situ tests	252
6.1.8	Shear strength of fissured soils	257
6.1.9	Estimation of the effective friction angle of granular soils	263
6.1.10	Shear strength of partially saturated soils	266
6.1.11	Shear strength of rockfill	266
6.2	Compressibility of soils and embankment materials	270
6.2.1	General principles	270
6.2.2	Methods of estimating the compressibility of earthfill, filters and rockfill	272
6.3	Permeability of soils	282
6.3.1	General principles	282
6.3.2	Laboratory test methods	285

6.3.3	Indirect test methods	286
6.3.4	Effects of poor sampling on estimated permeability in the laboratory	288
6.3.5	In-situ testing methods	289
<b>CHAPTER 7 CLAY MINERALOGY, SOIL PROPERTIES, AND DISPERSIVE SOILS</b>		<b>291</b>
7.1	Introduction	291
7.2	Clay minerals and their structure	292
7.2.1	Clay minerals	292
7.2.2	Bonding of clay minerals	293
7.2.3	Bonding between layers of clay minerals	294
7.3.	Interaction between water and clay minerals	296
7.3.1	Adsorbed water	297
7.3.2	Cation exchange	298
7.3.3	Formation of diffuse double layer	299
7.3.4	Mechanism of dispersion	301
7.4.	Identification of clay minerals	301
7.4.1	X-ray diffraction	301
7.4.2	Differential thermal analysis (DTA)	301
7.4.3	Electron microscopy	302
7.4.4	Atterberg limits	302
7.4.5	The activity of the soil	302
7.5	Engineering properties of clay soils related to the types of clay minerals present	303
7.5.1	Dispersivity	303
7.5.2	Shrink and swell characteristics	304
7.5.3	Shear strength	305
7.6	Identification of dispersive soils	305
7.6.1	Laboratory tests	305
7.6.2	Field identification and other factors	311
7.7	Use of dispersive soils in embankment dams	312
7.7.1	Problems with dispersive soils	312
7.7.2	Construction with dispersive soils	314
7.7.3	Turbidity of reservoir water	315
<b>CHAPTER 8 EMBANKMENT DAMS, THEIR ZONING AND SELECTION</b>		<b>317</b>
8.1	Historic performance of embankment dams and the lessons to be learned	317
8.2	Types of embankment dams, their advantages and limitations	319
8.2.1	The main types of embankment dams and zoning	319
8.2.2	The general principles of control of seepage pore pressures and internal erosion and piping	321
8.2.3	Taking account of the likelihood and consequences of failure in selecting the type of embankment	322
8.2.4	Types of embankment dams, their advantages, limitations and applicability	323
8.3	Zoning of embankment dams and typical construction materials	323
8.3.1	General principles	323
8.3.2	Examples of embankment designs	329

8.4	Selection of embankment type	334
8.4.1	Availability of construction materials	334
8.4.2	Foundation conditions	338
8.4.3	Climate	339
8.4.4	Topography and relation to other structures	339
8.4.5	Saddle dam	339
8.4.6	Staged construction	340
8.4.7	Time for construction	341
<b>CHAPTER 9 DESIGN, SPECIFICATION AND CONSTRUCTION OF FILTERS</b>		<b>343</b>
9.1	General requirements for design and the function of filters	343
9.1.1	Functional requirements	343
9.1.2	Flow conditions acting on filters	343
9.1.3	Critical and non-critical filters	344
9.1.4	Filter design notation and concepts	345
9.2	Design of critical and non-critical filters	349
9.2.1	Review of available methods for designing filters with flow normal to the filter	349
9.2.2	Review of other factors affecting filter design and performance	357
9.2.3	Review of available methods for designing filters with flow parallel to the filter	360
9.2.4	Recommended method for design of critical filters, with flow normal to the filter	361
9.2.5	Recommended method for design of less critical and non-critical filters	364
9.3	Assessing filters and transition zones in existing dams	365
9.3.1	Some general issues	365
9.3.2	Continuing and excessive erosion criteria	366
9.3.3	Excessive fines content in filters or transition zones	371
9.4	Design criteria for pipe drains and pressure relief well screens	373
9.4.1	Pipe drains	373
9.4.2	Pressure relief well screens	373
9.5	Specification of particle size and durability of filters	373
9.5.1	Particle size distribution	373
9.5.2	Durability	374
9.6	Dimensions, placement and compaction of filters	379
9.6.1	Dimensions and method of placement of filters	379
9.6.2	Sequence of placement of filters and control of placement width and thickness	382
9.6.3	Compaction of filters	383
9.7	Use of geotextiles as filters in dams	384
9.7.1	Types and properties of geotextiles	384
9.7.2	Geotextile filter design criteria	387
<b>CHAPTER 10 CONTROL OF SEEPAGE, INTERNAL EROSION AND PIPING FOR EMBANKMENT DAMS</b>		<b>393</b>
10.1	General requirements and methods of control	393
10.2	Some particular features of rock and soil foundations which affect seepage and seepage control	394

10.3	Details of some measures for pore pressure and seepage flow control	397
10.3.1	Horizontal and vertical drains	397
10.3.2	Treatment of the sides of the cutoff trench	399
10.3.3	Prevention of “blowup”, “boiling” or “liquefaction” of the foundation	400
10.4	Control of foundation seepage by cutoffs	402
10.4.1	General effectiveness of cutoffs	402
10.4.2	Cutoff trench	403
10.4.3	Slurry trench cutoff	405
10.4.4	Grout diaphragm wall	408
10.4.5	Diaphragm wall using rigid or plastic concrete	409
10.4.6	Methods of excavation of diaphragm walls	413
10.4.7	Permeability of cutoff walls	416
10.5	We live in a three dimensional world!	417
10.6	The mechanics of internal erosion and piping	418
10.6.1	Some general issues	418
10.6.2	Piping in the embankment	418
10.6.3	Piping through the foundation	419
10.6.4	Piping from the embankment into the foundation	422
10.7	Factors influencing the likelihood of internal erosion and piping	422
10.7.1	Piping through the embankment	423
10.7.2	Piping through the foundation	435
10.7.3	Piping from the embankment to the foundation	438
10.7.4	How to apply this information	439
<b>CHAPTER 11 ANALYSIS OF STABILITY AND DEFORMATIONS</b>		<b>441</b>
11.1	Methods of analysis	441
11.2	Limit equilibrium analysis methods	441
11.2.1	General characteristics	441
11.2.2	Some common problems	445
11.2.3	Three dimensional analysis	446
11.2.4	Shear strength of partially saturated soils	447
11.3	Selection of shear strength for design	448
11.3.1	Drained, effective stress parameters	448
11.3.2	Undrained, total stress parameters	450
11.3.3	Inherent soil variability	453
11.4	Estimation of pore pressures and selection of strengths for steady state, construction and drawdown conditions	455
11.4.1	Steady state seepage condition	455
11.4.2	Pore pressures during construction and analysis of stability at the end of construction	460
11.4.3	Drawdown pore pressures and the analysis of stability under drawdown conditions	466
11.5	Design acceptance criteria	470
11.5.1	Acceptable factors of safety	470
11.5.2	Post failure deformation assessment	472
11.6	Examples of unusual issues in analysis of stability	473
11.6.1	Hume No.1 Embankment	473
11.6.2	Eppalock Dam	475
11.6.3	The lessons learnt	477

11.7	Analysis of deformations	477
11.8	Probabilistic analysis of the stability of slopes	479
<b>CHAPTER 12 DESIGN OF EMBANKMENT DAMS TO WITHSTAND EARTHQUAKES</b>		<b>481</b>
12.1	Effects of earthquake on embankment dams	481
12.2	Earthquakes and their characteristics	482
12.2.1	Earthquake mechanisms and ground motion	482
12.2.2	Earthquake magnitude, and intensity	484
12.2.3	Attenuation and amplification of ground motion	485
12.2.4	Earthquakes induced by the reservoir	487
12.3	Evaluation of seismic hazard	488
12.3.1	Probabilistic approach	488
12.3.2	Seismic hazard from known active faults	489
12.3.3	Other forms of expression of seismic hazard	491
12.3.4	Selection of design seismic loading	491
12.3.5	The need to get good advice	492
12.4	Liquefaction of dam embankments and foundations	492
12.4.1	Definitions and the mechanics of liquefaction	492
12.4.2	Soils susceptible to liquefaction	500
12.4.3	The “simplified procedure” for assessing liquefaction resistance of a soil	503
12.5	Post liquefaction shear strength and stability analysis	515
12.5.1	Some general principles	515
12.5.2	Method for estimating $S_{u(LIQ)}$	516
12.5.3	Estimation of pore pressure increase due to cyclic loading	518
12.5.4	Post liquefaction limit equilibrium stability and deformation analysis	518
12.6	Seismic stability analysis of embankments	519
12.6.1	Preamble	519
12.6.2	Pseudo-static analysis	520
12.6.3	Simplified methods of deformation analysis for dams where liquefaction and significant strain weakening do not occur	521
12.6.4	Numerical methods	528
12.7	Defensive design principles for embankment dams	530
<b>CHAPTER 13 EMBANKMENT DAM DETAILS</b>		<b>533</b>
13.1	Freeboard	533
13.1.1	Definition and overall requirements	533
13.1.2	Estimation of wave runup freeboard for feasibility and preliminary design	534
13.1.3	Estimation of wind setup and wave runup for detailed design	534
13.2	Slope protection	538
13.2.1	Upstream slope protection	538
13.2.2	Downstream slope protection	544
13.3	Embankment crest details	546
13.3.1	Camber	546
13.3.2	Crest width	547
13.3.3	Curvature of crest in plan	548

13.4	Embankment dimensioning and tolerances	548
13.4.1	Dimensioning	548
13.4.2	Tolerances	549
13.5	Conduits through embankments	550
13.5.1	Piping into the conduit	550
13.5.2	Piping along and above the conduit	552
13.5.3	Flow out of the conduit	554
13.5.4	Conclusions	554
13.5.5	Recommendations	555
13.6	Interface between earthfill and concrete structures	558
13.7	Flood control structures	560
13.8	Design of dams for overtopping during construction	561
13.8.1	General design concepts	561
13.8.2	Types of steel mesh reinforcement	562
13.8.3	Design of steel reinforcement	567
<b>CHAPTER 14 SPECIFICATION AND QUALITY CONTROL OF EARTHFILL AND ROCKFILL</b>		<b>569</b>
14.1	Specification of rockfill	569
14.2	Specification of earthfill	572
14.3	Specification of filters	576
14.4	Quality control	577
14.4.1	General	577
14.4.2	“Methods,” and “performance” criteria	577
14.4.3	Quality control	578
14.4.4	Influence of non technical factors on the quality of embankment dams	579
14.5	Testing of rockfill	582
14.5.1	Particle size, density and permeability	582
14.5.2	Field rolling trials	583
14.6	Testing of earthfill	584
14.6.1	Compaction-test methods	584
14.6.2	Compaction control – some common problems	586
14.6.3	Compaction control – some other methods	587
<b>CHAPTER 15 CONCRETE FACE ROCKFILL DAMS</b>		<b>589</b>
15.1	General arrangement and reasons for selecting this type of dam	589
15.1.1	Historic development of concrete face rockfill dams	589
15.1.2	General arrangement – modern practice	589
15.1.3	Site suitability, and advantages of concrete face rockfill dams	593
15.2	Rockfill zones and their properties	594
15.2.1	Zone 2D – Transition rockfill	594
15.2.2	Zones 2E, 3A and 3B – Fine rockfill, rockfill and coarse rockfill	596
15.2.3	Effect of rock properties and compaction on modulus of rockfill	601
15.2.4	Estimation of the modulus of rockfill	608
15.2.5	Selection of side slopes and analysis of slope stability	612
15.3	Concrete face	613
15.3.1	Plinth	613
15.3.2	Face slab	616

15.3.3	Perimetric joint	619
15.3.4	Crest detail	624
15.4	Construction aspects	627
15.4.1	Plinth construction and special details	627
15.4.2	River diversion	628
15.4.3	Embankment construction	628
15.4.4	Face slab construction	630
15.5	Some non-standard design features	631
15.5.1	Use of dirty rockfill	631
15.5.2	Dams on poor foundation	632
15.5.3	Plinth gallery	634
15.5.4	Earthfill cover over the face slab	634
15.5.5	Spillway over the dam crest	635
15.6	Observed settlements, and displacements of the face slab, and joints	636
15.6.1	General behaviour	636
15.6.2	Post construction crest settlement	637
15.6.3	Face slab displacements and cracking	640
15.6.4	Cracks in CFRD dams	646
15.7	Observed leakage of CFRD	648
15.7.1	Modern CFRD	648
15.7.2	Early CFRD and other dams which experienced large leakage	654
15.8	Framework for assessing the likelihood of failure of CFRD	654
15.8.1	Overview of approach	654
15.8.2	Assessment of likelihood of initiation of a concentrated leak	657
15.8.3	Assessment of the likelihood of continuation of a concentrated leak	660
15.8.4	Assessment of the likelihood of progression to form a pipe	660
15.8.5	Assessment of the likelihood of a breach forming	661
15.8.6	Concluding remarks	661
	Further Reading	662
<b>CHAPTER 16 CONCRETE GRAVITY DAMS AND THEIR FOUNDATIONS</b>		<b>663</b>
16.1	Outline of this chapter	663
16.2	Analysis of the stability for normal operating and flood loads	663
16.2.1	Design loads	663
16.2.2	Load combinations	664
16.2.3	Kinematically feasible failure models	665
16.2.4	Analysis of stability	666
16.2.5	Acceptance criteria	668
16.3	Strength and compressibility of rock foundations	670
16.3.1	Some general principles	670
16.3.2	Assessment of rock shear strength	670
16.3.3	Tensile strength of rock foundations	676
16.3.4	Compressibility of jointed rock foundation	676
16.4	Strength of the concrete in the dam	677
16.4.1	What is recommended in guidelines	677
16.4.2	Measured concrete strengths from some USA dams	677
16.5	Strength of the concrete-rock contact	682
16.6	Uplift in the dam foundation and within the dam	684
16.6.1	What is recommended in guidelines	684
16.6.2	Some additional information on uplift pressures	686

16.7	Silt load	693
16.8	Ice load	693
16.9	The design and analysis of gravity dams for earthquake loading	693
16.9.1	Introduction	693
16.9.2	Gravity dams on soil foundations	694
16.9.3	Gravity dams on rock foundations	694
16.9.4	Concluding remarks	700
 <b>CHAPTER 17 FOUNDATION PREPARATION AND CLEANUP FOR EMBANKMENT AND CONCRETE DAMS</b>		 701
17.1	General requirements	701
17.1.1	Embankment dams	701
17.1.2	Concrete dams	701
17.1.3	Definition of foundation requirements in geotechnical terms	704
17.2	General foundation preparation for embankment dams	704
17.2.1	General foundation under earthfill	704
17.2.2	General foundation under rockfill	704
17.2.3	General foundation under horizontal filter drains	705
17.3	Cutoff foundation for embankment dams	706
17.3.1	The overall objectives	706
17.3.2	Cutoff in rock	706
17.3.3	Cutoff in soil	710
17.4	Width and batter slopes for cutoff in embankment dams	710
17.4.1	Cutoff width $W$	711
17.4.2	Batter slope	711
17.4.3	Setting out	711
17.5	Selection of cutoff foundation criteria for embankment dams	712
17.6	Slope modification and seam treatment for embankment dams	713
17.6.1	Slope modification	713
17.6.2	Seam treatment	716
17.6.3	Dental concrete, pneumatically applied mortar, and slush concrete	716
17.7	Assessment of existing embankment dams	718
17.8	Foundation preparation for concrete gravity dams on rock foundations	719
17.8.1	The general requirements	719
17.8.2	Excavation to expose a suitable rock foundation	719
17.8.3	Treatment of particular features	720
17.8.4	Treatment at sites formed by highly stressed rock	724
 <b>CHAPTER 18 FOUNDATION GROUTING</b>		 729
18.1	General concepts of grouting dam foundations	729
18.2	Grouting design – cement grout	731
18.2.1	Staging of grouting	731
18.2.2	The principles of “closure”	735
18.2.3	Effect of cement particle size, viscosity, fracture spacing and Lugeon value on the effectiveness of grouting	738
18.2.4	Recommended closure criteria for embankment and concrete dams	740
18.2.5	The depth and lateral extent of grouting	742
18.2.6	Grout hole position and orientation	744

18.3	Some practical aspects of grouting with cement	744
18.3.1	Grout holes	744
18.3.2	Standpipes	744
18.3.3	Grout caps	746
18.3.4	Grout mixers, agitator pumps and other equipment	747
18.3.5	Water cement ratios	749
18.3.6	Grout pressures	751
18.3.7	Monitoring of grouting program	752
18.3.8	Water pressure testing	752
18.3.9	Type of cement	752
18.3.10	Prediction of grout takes	753
18.3.11	Durability of cement grout curtains	754
18.4	Chemical grouts in dam engineering	755
18.4.1	Types of chemical grouts and their properties	755
18.4.2	Grout penetrability in soil and rock	756
18.4.3	Grouting technique	761
18.4.4	Applications to dam engineering	762
 CHAPTER 19 MINE AND INDUSTRIAL DAMS		 767
19.1	General	767
19.2	Tailings and their properties	767
19.2.1	What are mine tailings?	767
19.2.2	Tailings terminology and definitions	768
19.2.3	Tailings properties	770
19.3	Methods of tailings discharge and water recovery	776
19.3.1	Tailings discharge	776
19.3.2	Cyclones	777
19.3.3	Subaqueous vs subaerial deposition	778
19.3.4	Water recovery	780
19.4	Prediction of tailings properties	781
19.4.1	Beach slopes and slopes below water	781
19.4.2	Particle sorting	783
19.4.3	Permeability	784
19.4.4	Dry density	784
19.4.5	The prediction of desiccation rates	786
19.4.6	Drained and undrained shear strength	786
19.5	Methods of construction of tailings dams	788
19.5.1	General	788
19.5.2	Construction using tailings	789
19.5.3	Construction using conventional water dams	793
19.5.4	Selection of embankment construction method	794
19.5.5	Control of seepage by tailings placement, blanket drains and underdrains	794
19.5.6	Storage layout	797
19.5.7	Other disposal methods	800
19.6	Seepage from tailings dams and its control	804
19.6.1	General	804
19.6.2	Principles of seepage flow and estimation	804
19.6.3	Some common errors in seepage analysis	806
19.6.4	Seepage control measures	808
19.6.5	Seepage collection and dilution measures	812
19.6.6	Rehabilitation	814

<b>CHAPTER 20 MONITORING AND SURVEILLANCE OF EMBANKMENT DAMS</b>	<b>819</b>
20.1 What is monitoring and surveillance?	819
20.2 Why undertake monitoring and surveillance?	819
20.2.1 The objectives	819
20.2.2 Is it really necessary?	820
20.2.3 Some additional information on embankment dam failures and incidents	822
20.2.4 Time for development of piping failure of embankment dams and ease of detection	824
20.3 What inspections and monitoring is required?	831
20.3.1 General principles	831
20.3.2 Some examples of well instrumented embankment dams	833
20.3.3 Dam safety inspections	833
20.4 How is the monitoring done?	841
20.4.1 General principles	841
20.4.2 Seepage measurement and observation	842
20.4.3 Surface displacements	844
20.4.4 Pore pressures	844
20.4.5 Displacements and deformation	858
20.4.6 Thermal monitoring of seepage	864
