Contents

<i>Foreword</i>	<i>ix</i>
<i>Preface</i>	<i>xi</i>
<i>Acknowledgements</i>	<i>xiv</i>
1 Introduction	1
1.1 Statement of the problem	1
1.2 Organisation of the text	7
2 Concepts of the cone model	10
2.1 Rigorous methods	10
2.2 Wave propagation in a truncated semi-infinite homogeneous cone	11
2.3 Wave reflection and refraction at a material discontinuity in a cone	17
2.4 Disk on the surface of a layered half-space	23
2.5 Disk embedded in a layered half-space	24
2.6 Foundation embedded in a layered half-space	26
2.7 Features of the cone model	28
3 Initial cone with outward wave propagation	29
3.1 Translational cones	30
3.2 Rotational cones	35
3.3 Interpretation of the rocking cone	40
3.4 Incompressible or nearly-incompressible half-space	44
3.4.1 Wave velocity	44
3.4.2 Trapped mass	44
3.5 Foundation on the surface of a homogeneous half-space	46
3.6 Double cones	52
4 Wave reflection and refraction at a material discontinuity	55
4.1 Reflection coefficient for a translational cone	55
4.2 Reflection coefficient for a rotational cone	60
4.3 Dynamic stiffness of a surface foundation on a layer overlying a half-space	63
4.4 Disk embedded in a homogeneous half-space	70

4.5	Computer implementation	72
4.6	Termination criteria	81
5	Foundation embedded in a layered half-space	84
5.1	Stack of embedded disks	84
5.2	Dynamic flexibility of the free field	86
5.3	Dynamic stiffness and effective foundation input motion	87
5.4	Computer implementation	93
5.5	Examples	97
6	Evaluation of accuracy	106
6.1	Foundation on the surface of a layered half-space	107
6.2	Foundation embedded in a layered half-space	108
6.3	Large number of cone segments	112
6.4	Cutoff frequency	113
6.5	Incompressible case	114
6.6	Hemi-ellipsoid embedded in a homogeneous half-space	115
6.7	Sphere embedded in a homogeneous full-space	117
7	Engineering applications	121
7.1	Machine foundation on the surface of a layered half-space	121
7.1.1	Dynamic load of single cylinder machine	121
7.1.2	Dynamic load of two-cylinder machine with cranks at 90°	124
7.1.3	Dynamic system	125
7.1.4	Equations of motion	127
7.2	Seismic analysis of a structure embedded in a layered half-space	129
7.3	Offshore wind turbine tower with a suction caisson foundation	135
8	Concluding remarks	142
Appendix A:	Frequency-domain response analysis	146
A.1	Alternative descriptions of harmonic motion	146
A.2	Complex frequency response function	148
A.3	Periodic excitation	151
A.4	Arbitrary excitation	152
Appendix B:	Dynamic soil-structure interaction	154
B.1	Equations of motion in total displacement	154
B.2	Free-field response of site	157
Appendix C:	Wave propagation in a semi-infinite prismatic bar	162
Appendix D:	Historical note	168
Appendix E:	Program CONAN (CONE ANalysis) – user's guide	170
E.1	Program overview	170
E.2	Problem description	171

E.3	Using CONAN	173
E.4	Further processing of results	176
Appendix F: MATLAB[®] Procedures for cone analysis		177
F.1	MATLAB overview	177
F.2	Problem description	178
F.3	General functions	179
F.4	Heart of the procedure	181
F.5	Dynamic stiffness of the free field	185
F.6	Dynamic stiffness of the foundation	186
F.7	Effective foundation input motion	190
F.8	Worked example: seismic response	191
Appendix G: Analysis directly in time domain		196
G.1	Flexibility analysis for translation	197
G.2	Interaction force-displacement relationship in the time domain for translation	201
G.3	Seismic analysis of a rigid block on the surface of a layered half-space	204
G.4	Rotation analysis	205
