SLOPES IN STIFF-FISSURED CLAYS AND SHALES by James M. Duncan and Peter Dunlop	467
SOIL MECHANICS AND THEOREMS OF LIMIT ANALYSIS by W. F. Chen	493
CONSOLIDATION UNDER CONSTANT RATES OF STRAIN by Ronald E. Smith and Harvey E. Wahls	519
RESPONSE OF EARTH DAMS TO TRAVELING SEISMIC WAVES by Mostafa Dibaj and Joseph Penzien	541
A STUDY OF BULK AND SHEAR MODULI OF A SAND by Leonard Domaschuk and Neil H. Wade	561
DYNAMIC PREDICTION OF PILE STATIC BEARING CAPACITY by Robert H. Scanlan and John J. Tomko	583
EXPERIMENTAL STUDY OF BUCKLING OF BURIED DOMES by Z. Getzler and L. Lupu	605

(over)

This Journal is published bimonthly by the American Society of Civil Engineers. Publications office is at 2500 South State Street, Ann Arbor, Michigan 48104. Editorial and General Offices are at 345 East 47th Street, New York, N.Y. 10017. Subscription price is \$8.00 per year with discounts to members and libraries. Second-class postage paid at Ann Arbor, Michigan. EM, HY, SA, SM.

DISCUSSION

Proc. Paper 6429

DEFORMATION OF SAND IN HYDROSTATIC COMPRESSION, by Hon-yim Ko and Ronald F. Scott (March, 1967. Prior Discussions: Jan., 1968, May, 1968).	
closure	627
STABILITY OF NATURAL SLOPES IN SENSITIVE CLAY, by Carl B. Crawford and William J. Eden (July, 1967. Prior Discussion: Sept., 1968).	
closure	628
APPLICATIONS OF LIMIT PLASTICITY IN SOIL MECHANICS, ^a by W. D. Liam Finn (Sept., 1967. Prior Discussions: May, 1968, Sept., 1968).	
by James Graham	630
CONSOLIDATION UNDER ELECTRICAL-PRESSURE GRADIENTS, by Robert L. Nicholls and Rene L. Herbst, Jr. (Sept., 1967. Prior Discussion: Sept., 1968).	
closure	631
EFFECT OF COMPACTION ON STRENGTH OF SOIL CEMENT, by Nagih M. El-Rawi, T. Allan Haliburton and Robert L. Janes (Nov., 1967. Prior Discussion: May, 1968).	
closure	633
SHEET-PILE ANALYSIS BY DISTRIBUTION THEORY, ^a by Dafalla A. Turabi and A. Balla (Jan., 1968).	
by James B. Rauhut	634
by P. W. Rowe	637
GUIDE SPECIFICATIONS FOR CHEMICAL GROUTS, ^a by The Committee on Grouting (March, 1968).	
by B. U. Duvall	640
by George W. Whitesides	641
by C. Martin Riedel	642
by James Warner	648
by Edward D. Graf	653

^a Discussion period closed for this paper. Any other discussion received during this discussion period will be published in subsequent Journals.

VIBRATION MODULUS OF NORMALLY CONSOLIDATED CLAY,^a	
by Bobby O. Hardin and William Black (March, 1968).	
by Robert V. Whitman, Richard J. Holt, Vincent J. Murphy	656
by Ricardo Dobry, Mauricio Poblete	659
by Gerald R. Thiers	662
CONTRIBUTION TO THE ANALYSIS OF RESTRAINT IN SOIL,	
by Zvi Getzler (March, 1968).	
errata	663
EFFECTS OF LOADING ON TRIAXIAL TEST RESULTS,^a by	
Raymond Lundgren, James K. Mitchell and James H. Wilson (March, 1968).	
by Osondu J. Uzomaka	663
END BEARING AND SKIN FRICTION RESISTANCE OF PILES,^a	
by Bengt B. Broms and Lars Hellman (March, 1968).	
by Vasant N. Vijayvergiya, Lymon C. Reese	665
by Richard E. Mabry	668
by Dinesh Mohan and G. S. Jain	673
SETTLEMENT OF STRIP LOAD ON ELASTIC-PLASTIC SOIL,^a	
by Karre Höeg, John T. Christian and Robert V. Whitman (March, 1968).	
by Bent Hansen	675
by S. Valliappan	676
ELECTRICAL DISPERSION IN RELATION TO SOIL STRUC- TURE,^a by James K. Mitchel and Kandiah Arulanandan (March, 1968).	
by Chin Fung Kee	679
FINITE-ELEMENT METHOD FOR PROBLEMS IN SOIL MECHANICS,^a by Chiyarath V. Girijavallabhan and Lymon C. Reese (March, 1968).	
by Ian M. Smith	683
GRAPHICAL STABILITY ANALYSIS OF SLOPES IN JOINTED ROCK,^a by Klaus W. John (March, 1968).	
by Marc Panet	685
by R. Vormeringer	686
by G. Vigier	690
by Richard E. Goodman	698

^a Discussion period closed for this paper. Any other discussion received during this discussion period will be published in subsequent Journals.

 TECHNICAL NOTES

 Proc. Paper 6463

GROUTED CUTOFF AT ROCKY REACH DAM by William F. Swiger	705
INFLUENCE CHARTS FOR TWO-LAYER ELASTIC FOUNDATIONS by Y. H. Huang	709
STABILITY ANALYSIS OF SLOPING CORE EMBANKMENTS by Kenneth A. Zuckerman	715
PORE PRESSURE EQUATION FOR ANISOTROPIC CLAYS by Wallace H. Baker and Raymond J. Krizek	719

 INTERNATIONAL ABSTRACTS

 Proc. Paper 6472

INTERNATIONAL ABSTRACTS SECTION by Joseph M. DeSalvo, Chmn. on Information Retrieval, SMFD.	725

INFORMATION RETRIEVAL

The key words, abstract, and reference "cards" for each article in this Journal represent part of the ASCE participation in the EJC information retrieval plan. The retrieval data are placed herein so that each can be cut out, placed on a 3 x 5 card and given an accession number for the user's file. The accession number is then entered on key word cards so that the user can subsequently match key words to choose the articles he wishes. Details of this program were given in an August, 1962 article in CIVIL ENGINEERING, reprints of which are available on request to ASCE headquarters.

6449 SLOPES IN STIFF-FISSURED CLAYS AND SHALES

KEY WORDS: clays; overconsolidated soils; progressive failures; safety factors; shales; slope stability; soil mechanics; stress analysis

ABSTRACT: Case histories and probable causes of slope failures in stiff-fissured clays and shales are reviewed, and analyses are described which were performed to determine the influence of the initial stress conditions on the stresses around excavated slopes. These analyses show that the shear stresses around excavations are much larger for conditions representative of heavily overconsolidated clays (high initial horizontal stresses) than for conditions representative of normally consolidated clays (low initial stresses). Shear stresses large enough to cause failure at some points may develop even when the factor of safety calculated by the $\phi = 0$ method of analysis is much larger than unity. The higher the horizontal stresses before excavation, the higher the factor of safety corresponding to development of local failure.

6450 SOIL MECHANICS AND THEOREMS OF LIMIT ANALYSIS

KEY WORDS: bearing capacities; energy dissipation; plasticity; plastic limits; soil mechanics; truss action

ABSTRACT: An attempt is made to exhibit the plastic limit theorems in terms more familiar to the civil engineer. The interpretation of a continuous velocity region as the limiting case of infinitely many rigid blocks separated by surfaces of discontinuity provide an excellent technique for obtaining energy dissipation needed for upper bound calculations on plastic limit load. Similarly, the intuitive approach of imagining a pin-connected truss to support loads is shown to provide an excellent technique for obtaining lower bounds. Also a graphical procedure is introduced to eliminate much of the tedium associated with the construction of a stress field. The problems of the loaded truncated wedge and the wedge under unilateral pressure are treated as illustrative examples. Then the general strip foundation is solved. Upper and lower bounds are plotted and are seen to be rather close. Friction effects on the bearing capacity of foundations are also discussed.

6452 CONSOLIDATION UNDER CONSTANT RATES OF STRAIN

KEY WORDS: compressibility; consolidation; rapid compaction control; settlement relationship; strain rate; tests

ABSTRACT: Consolidation tests on three materials were conducted by inducing six different constant rates of strain on the samples. The total load on the sample, the pore pressure at the base and the deformation were measured. A theoretical solution was developed to enable the determination of the coefficient of consolidation, the compression index, and the preconsolidation pressure from this testing procedure. Within established limits, it is shown that the consolidation parameters determined by this method agree with parameters determined by the conventional testing method. The advantages of the proposed procedure are that a much shorter time is required to determine the consolidation parameters and that this procedure can be used to study the strain rate sensitivity of cohesive soils to consolidation loads.
