VOLUME 89 NO. SM6
NOVEMBER 1963
PART 1

JOURNAL of the
Soil Mechanics
and Foundations
Division

PROCEEDINGS OF THE

AMERICAN SOCIETY
OF CIVIL ENGINEERS

BASIC REQUIREMENTS FOR MANUSCRIPTS

Original papers and discussions of current papers should be submitted to the Manager of Technical Publications, ASCE. Authors should indicate the technical division to which the paper is referred. The final date on which a discussion should reach the Society is given as a footnote with each paper. Those who are planning to submit material will expedite the review and publication procedures by complying with the following basic requirements:

1. Titles must have a length not exceeding 50 characters and spaces.
2. A summary of approximately 50 words must accompany the paper, a 300-word synopsis must precede it, and a set of conclusions must end it.
3. The manuscript (an original ribbon copy and two duplicate copies) should be double-spaced on one side of 8½-inch by 11-inch paper. Three copies of all illustrations, tables, etc., must be included.
4. The author's full name, Society membership grade, and footnote reference stating present employment must appear on the first page of the paper.
5. Mathematics are recomposed from the copy that is submitted. Because of this, it is necessary that letters be drawn carefully, and that special symbols be properly identified. The letter symbols used should be defined where they first appear, in the illustrations or in the text, and arranged alphabetically in an Appendix.
6. Tables should be typed (an original ribbon copy and two duplicate copies) on one side of 8½-inch by 11-inch paper. Specific illustrations and explanation must be made in the text for each table.
7. Illustrations must be drawn in black ink on one side of 8½-inch by 11-inch paper. Because illustrations will be reproduced with a width of between 3-inches and 4½-inches, the lettering must be large enough to be legible at this width. Photographs should be submitted as glossy prints. Explanations and descriptions must be made within the text for each illustration.
8. The desirable average length of a paper is about 12,000 words and the absolute maximum is 18,000 words. As an approximation, each full page of typed text, table, or illustration is the equivalent of 300 words.
9. Technical papers intended for publication must be written in the third person.
10. A list of key words and an informative abstract should be provided for information retrieval purposes.

Reprints from this Journal may be made on condition that the full title, name of author, name of publication, page reference, and date of publication by the Society are given. The Society is not responsible for any statement made or opinion expressed in its publications.

This Journal is published bi-monthly by the American Society of Civil Engineers. Publication office is at 2500 South State Street, Ann Arbor, Michigan. Editorial and General Offices are at United Engineering Center, 345 East 47th Street, New York 17, N.Y. \$4.00 of a member's dues are applied as a subscription to this Journal. Second-class postage paid at Ann Arbor, Michigan.

The index for 1962 was published as ASCE Publication 1963-10 (list price \$2.00); indexes for previous years are also available.

Papers

	Page
Shear Strength of an Anisotropically Consolidated Clay by Bengt B. Broms and M. V. Ratnam	1
Dissipation of Elastic Wave Energy in Granular Soils by J. R. Hall, Jr., and F. E. Richart, Jr.	27
Load Transfer in a Step-Taper Pile by E. D'Appolonia and J. A. Hribar	57
(over)	

Copyright 1963 by the American Society of Civil Engineers.

Note.—Part 2 of this Journal is the 1963-43 Newsletter of the Soil Mechanics Division.

The three preceding issues of this Journal are dated May 1963, July 1963, and September 1963.

DISCUSSION

Page

Experience with Canadian Varved Clays, by V. Milligan, L. G. Soderman, and A. Rutka. (August, 1962. Prior discussion: February, May, 1963. Discussion closed.) by V. Milligan, L. G. Soderman, and A. Rutka (closure)	81
Direct-Shear Test for Effective-Strength Parameters, by Hugh M. O'Neil. (August, 1962. Prior discussion: February, May, 1963. Discussion closed.) by Hugh M. O'Neil (closure)	83
Analysis of the Engineering News Pile Formula, by Hans A. Agerschou. (October, 1962. Prior discussion: December, 1962, March, May, 1963. Discussion closed.) by Hans A. Agerschou (closure)	93
Analysis of Primary and Secondary Consolidation, by Harvey E. Wahls. (December, 1962. Prior discussion: May, July, 1963. Discussion closed.) by J. Brinch Hansen	95
Load Transfer in End-Bearing Steel H-Piles, by E. D'Appolonia, and J. P. Romualdi. (March, 1963. Prior discussion: September, 1963. Discussion closed.) by J. Przystanski	97
Effective Stress Theory of Soil Compaction, by Roy E. Olson. (March, 1963. Prior discussion: July, September, 1963. Discussion closed.) by John L. McRae and W. J. Turnbull	101
Flexibility of Clay and Cracking of Earth Dams, by G. A. Leonards and J. Narain. (March, 1963. Prior discussion: None. Discussion closed.) by K. S. Lane. by A. L. Little and G. C. Beavan	109 116
Oahe Dam: Geology, Embankment, and Cut Slopes, by Donald K. Knight. (March, 1963. Prior discussion: None. Discussion closed.) by J. L. Jaspar by R. Peterson	123 123
Bearing Capacity of Piles in Cohesionless Soils, by R. L. Norlund. (May, 1963. Prior discussion: None. Discussion closes November 1, 1963.) by Bengt B. Broms	125

Stress-Dilatancy, Earth Pressures, and Slopes,

by P. W. Rowe. (May, 1963. Prior discussion:

None. Discussion closes November 1, 1963.)

by R. E. Gibson and N. R. Morgenstern	127
by D. H. Trollope and A. K. Parkin	129
