CONTENTS

CHAPTER 1. IDENTIFYING CHARACTERISTICS OF SOILS

1-1	Introduction	1
1-2	Engineering characteristics	3
1-3	Size measurement	5
1-4	Soil, water, and air	14
1-5	Behavior of cohesive soil as a function of water content	18
1-6	Discussion of the water-content limit tests	23
1-7	Classification system	25

CHAPTER 2. CLAY MINERALOGY

2-1	Introduction	33
2-2	Atomic bonds	34
2-3	Clay mineralogy	36
2-4	Clay-water relations	43
2-5	Electrical effects	52
2-6	Clay mineral identification	54

CHAPTER 3. WATER FLOW IN SOIL

3-1	Introduction	62
3-2	Flow equations	62
3-3	Darcy's law	68
3-4	General equation	77

CHAPTER 4. STEADY-STATE FLOW

4-1	Introduction	90
4-2	Mathematical analysis	90
4-3	Solution by sketching	106
4-4	Electrical analogy	120
4-5	Numerical analysis	134

CHAPTER 5. TRANSIENT FLOW

5-1	Introduction	162
5-2	Effective stress	163
5-3	Change in degree of saturation	166
5-4	Change in void ratio	168
5-5	Compressibility of pore water	177
5-6	Compressibility of soil solids	178
5-7	Rate of storage equation	178
5-8	Transient flow equation; one-dimensional consolidation	181
5-9	Mathematical analysis	188
5-10	Approximate numerical analysis	206

5-11 Lumped-parameter analog methods of solution	218
5-12 Initial compression	222
5-13 Secondary compression	223
5-14 Unsteady unconfined flow	225
CHAPTER 6. SOIL DEFORMATION UNDER APPLIED STRESS	
6-1 Equilibrium equations	234
6-2 Representation of stress on Mohr diagram	242
6-3 Displacements and strains	245
6-4 Rheological properties of materials	247
6-5 Rheological equations of state	255
6-6 Solution of problems of linearly elastic solids	263
6-7 Pore pressures developed in soil by applied stresses	267
6-8 Settlement computations	275
CHAPTER 7. LIMITING CONDITIONS AT FAILURE IN COHESIONLESS SOIL	
7-1 Analysis of a simplified model of cohesionless soil	293
7-2 Application of failure theory to cohesionless soils	304
7-3 Influence of intermediate principal stress on failure	310
7-4 Effect of stress history on failure conditions	317
7-5 Pore-water considerations; drainage	325
7-6 Effect of rate of stress application	331
CHAPTER 8. STRESS CONDITIONS AT FAILURE IN COHESIVE SOILS	
8-1 Introduction	336
8-2 Physicochemical aspects	337
8-3 Experimental investigation of shear strength	356
8-4 Comparison and discussion of experimental results	370
8-5 Failure theories based on test results	376
8-6 Practical failure criteria	390
CHAPTER 9. PLASTIC-EQUILIBRIUM STATES IN SOIL	
9-1 Introduction	398
9-2 Ideal cohesionless material	403
9-3 Ideal cohesive material	429
9-4 Soils possessing both internal friction and cohesion	440
9-5 Approximate methods of determining the stability of foundations, walls, and slopes	449
APPENDIX A. COMMON LABORATORY TESTS	475
APPENDIX B. ANALYTICAL SOLUTIONS OF STRESSES AND DISPLACEMENTS IN LINEARLY ELASTIC SOLIDS	489
APPENDIX C. SOLUTION OF PROBLEMS OF PLASTIC EQUILIBRIUM	508
LIST OF SYMBOLS	527
INDEX	537
