

Physical and Geotechnical Properties of Soils

Joseph E.
Bowles

Professor of Civil Engineering, Bradley University

INTERNATIONAL STUDENT EDITION

McGRAW-HILL INTERNATIONAL BOOK COMPANY

Auckland Bogota Guatemala Hamburg Johannesburg Lisbon
London Madrid Mexico New Delhi Panama Paris San Juan
São Paulo Singapore Sydney Tokyo

Contents

Preface	xi
Chapter 1	
Introduction to Soil Mechanics, Statistics, and SI	1
1-1 Introduction	1
1-2 The Study of Soil Mechanics	2
1-3 Text Objectives	2
1-4 Some Typical Soil Problems	3
1-5 Historical Developments of Soil Mechanics	5
1-6 Sources of Information for Geotechnical Engineers	11
1-7 Elements of Statistics and Probability	12
1-8 SI Units	18
Chapter 2	
Soil Properties—Physical and Index	21
2-1 Introduction	21
2-2 Basic Definitions and Mass-Volume Relationships	21
2-3 Noncohesive and Cohesive Soils	33
2-4 Atterberg (or Consistency) Limits	33
2-5 Soil Moisture	35
2-6 Indices of Soil Consistency	35
2-7 Specific Surface	37
2-8 Specific Gravity	38
2-9 Soil Texture	40
2-10 Soil Phases	40
2-11 Grain Size	40
2-12 Unit Weight of Soils (Dry, Wet, and Submerged)	44

8-6	Effective Coefficient of Permeability of Stratified Soils	214
8-7	Capillarity and Capillary Effects in Soil	215
8-8	Seepage Forces and Quick Conditions	225
8-9	Summary	230
Chapter 9		
Seepage and Flow Net Theory		233
9-1	Introduction	233
9-2	Two-dimensional Seepage Flow Theory	233
9-3	Flow Nets	236
9-4	Flow Nets for Earth Dams	237
9-5	Drawing the Phreatic Line	239
9-6	Direct Computation of Seepage Quantity	240
9-7	Methods for Obtaining the Phreatic Line for Earth Dams	241
9-8	Flow Net Construction	244
9-9	The Flow Net When $k_x \neq k_y$	249
9-10	Flow Nets for Other Structures	251
9-11	Flow Net Construction at Boundary of Soils of Different Permeabilities	255
9-12	Control of Seepage	258
9-13	Sudden Drawdown and Seepage Forces	259
9-14	Piping and Control of Piping	261
9-15	Plan or Radial Flow Nets	263
9-16	Other Methods of Obtaining Flow Nets	266
9-17	Elements of Well Hydraulics	266
9-18	Summary	269
Chapter 10		
Stresses, Strains, and Rheological Concepts		273
10-1	General Considerations	273
10-2	General Stresses and Strains at a Point	274
10-3	Theory of Elasticity Concepts Used in Soil Mechanics Problems	275
10-4	Stress-Strain Modulus and Hooke's Law	280
10-5	Two-dimensional Stresses at a Point	283
10-6	Mohr's Stress Circle	285
10-7	Boussinesq Stresses in an Elastic Half-Space	286
10-8	Soil Deformations and Settlements	290
10-9	Rheological Models	291
10-10	Composite Rheological Models	293
10-11	Summary	297
Chapter 11		
Consolidation and Consolidation Settlements		299
11-1	Soil Consolidation Problems	299
11-2	Soil Consolidation	300

11-3	Arithmetic Plot of Consolidation Settlement Relationships	308
11-4	Approximate Methods to Determine C_c and C_e	309
11-5	Determination of the Preconsolidation Pressure	310
11-6	Soil Structure and Consolidation	311
11-7	Secondary Compression	311
11-8	Computation of Consolidation Settlements	312
11-9	Examples	313
11-10	Controlling Consolidation Settlements	316
11-11	Summary	316

Chapter 12

Rate of Consolidation 320

12-1	The Coefficient of Consolidation	320
12-2	Percent Consolidation	323
12-3	Methods of Obtaining the Time of Interest for Computing c_v	326
12-4	Rate of Consolidation Based on Strain	328
12-5	Illustrative Examples	334
12-6	Consolidation Rates for Layered Media	341
12-7	Three-dimensional Consolidation	342
12-8	Summary	342

Chapter 13

Shear Strength of Soils 345

13-1	Introduction	345
13-2	Soil Tests to Determine Shear Strength Parameters	347
13-3	Stress Paths and pq Diagrams	355
13-4	Soil Failure and Concept of Residual Strength	361
13-5	Pore Pressure Effects and Unconsolidated-undrained Tests (Undrained or U Tests)	363
13-6	Pore Pressure Effects in Consolidated-undrained (CU) Tests	367
13-7	Pore Pressure Effects in Consolidated-drained Tests	376
13-8	Sensitivity of Cohesive Soils	376
13-9	Empirical Methods for Shear Strength	377
13-10	Factors Affecting Shear Strength	382
13-11	The s_w/p Ratio	383
13-12	Pore Pressure Parameters	385
13-13	Summary	388

Chapter 14

Stress-Strain Characteristics and Stresses at a Point 393

14-1	Stress-Strain Data Required	393
14-2	The Stress-Strain Modulus	393
14-3	Poisson's Ratio	395

14-4	Factors Affecting the Stress-Strain Modulus and Approximations	397
14-5	Resilient Modulus	397
14-6	Dynamic Soil Stress-Strain Modulus	398
14-7	Cyclic Modulus of Deformation and Liquefaction	401
14-8	Summary	410
Chapter 15		
Soil Stresses and Soil Pressures		413
15-1	Soil Stresses at a Point	413
15-2	Active and Passive Earth Pressures	415
15-3	Pressures Against Walls	420
15-4	Inclined Cohesionless Ground	421
15-5	Lateral Earth Pressure for Cohesive Soils	424
15-6	The Trial Wedge Solution	428
15-7	Logarithmic Spiral and ϕ -Circle Methods for Passive Pressure in Cohesionless Soil	429
15-8	Shear Failure and Bearing Capacity	432
15-9	Immediate Elastic Settlements	436
15-10	Summary	437
Chapter 16		
Stability of Slopes		439
16-1	General Considerations in Stability of Slopes	439
16-2	Infinite Slopes	440
16-3	Stability of Infinite Cohesive Slopes	442
16-4	Circular Arc Analysis	443
16-5	The ϕ -Circle Method	445
16-6	Slope Analysis by Method of Slices	450
16-7	Wedge Block Analysis	454
16-8	Summary	458
Bibliography		460
Indexes		467
