I Introduction	I
1.1 Circumstances surrounding dams and the aims of this work	1
1.2 A short history of Japan	3
1.2.1 The Jomon and Yayoi Periods (to approximately A.D. 300)	4
1.2.2 The Kofun – Nara Period (approx. A.D. 300 to 794)	4
1.2.3 The Heian Period (794 to 1185)	5
1.2.4 The Kamakura to the Azuchi-Momoyama Period (1185 to 1600)	5
1.2.5 The Edo Period (1600 to 1868)	6
1.2.6 The Meiji Period (1868 to 1912)	7
1.2.7 The Taisho, Showa, and Heisei Periods (1912 to present day)	8
1.3 Outline of the history of dams in Japan	9
1.4 Characteristics of national land and dams in Japan	12
1.4.1 Characteristics of the national land and water usage by dams	12
1.4.2 Characteristics of regions surrounding dam reservoirs and rivers	15
1.5 WCD report and dams in Japan	16
1.5.1 Outline of the WCD report	16
1.5.2 Japan's dams from the perspective of the global review	17
1.6 Outline of this work	18
1.6.1 Roles that dams have played	18
1.6.2 Environmental and social impacts of dams and response to these impacts	19
1.6.3 Future roles of dams	19

2	Roles played by dams as seen in the history of water use in Japan	21
2.1	The development of irrigation and irrigation dams	21
2.1.1	The history of methods of obtaining irrigation water and the roles of irrigation ponds	21
2.1.2	Reformation of cultivation and the roles of irrigation dams	25
2.1.3	Examples of efforts to ensure a constant supply of irrigation water	28
2.2	The growth of modern cities and dams for municipal water	33
2.2.1	The start of modern municipal water supply systems in Japan	33
2.2.2	The spread of municipal water supply projects and the role of dams	37
2.2.3	Examples of roles played by dams in municipal water supply projects	41
2.3	Hydropower dams that have supported the growth of modern industry	43
2.3.1	Hydropower production and dams	44
2.3.2	The start of hydropower production	45
2.3.3	The start of long-distance transmission of electric power and large hydropower dams	46
2.3.4	The development of dams and conduit type high-capacity hydropower production	49
2.3.5	The increased use of river water as an energy source	50
2.4	Postwar rehabilitation and multi-purpose dams – the appearance of comprehensive river development dams	52
2.4.1	The dawn of multi-purpose dams with flood control	52
2.4.2	Dams in postwar rehabilitation and in Comprehensive Land Development Plans	54
2.4.3	Examples of roles of dams in Comprehensive National Land Development (Part 1) – The five large dams for flood control on the Kitakami River – [63]	60
2.4.4	Examples of the roles of dams in Comprehensive National Land Development (Part 2) – The Tenryu River Sakuma Dam, etc. that became the key to promoting electric power development –	64
2.4.5	Examples of roles of dams in Comprehensive National Land Development (Part 3) – The Kiso River Makio Dam for irrigation –	67
2.5	Dams that have supported the concentration of population and industry in large cities and the advance of national urbanization	71

2.5.1	Rapid economic growth and Comprehensive National Development Plans	71
2.5.2	Supplying water to large cities	72
2.5.3	Hydropower dams from the rapid economic growth period to the stable growth period	82
2.5.4	Flood control by dams, based on the River Law	90
3	Environmental and social impacts of dams and responses to these impacts	101
3.1	Dam projects and social conflict	101
3.2	Impacts on the social condition in reservoir areas and responses to such impacts	103
3.2.1	The social impact of dam projects on reservoir areas and responses to such impact	103
3.2.2	Compensation measures by dam project organizations for residents submerged by dam projects and for related municipalities	103
3.2.3	Support for submerge-related municipalities by central and regional governments, etc.	106
3.2.4	Support for the activation of reservoir areas	111
3.3	Impacts on the river environment and measures against these impacts	113
3.3.1	Impacts of a change in the flow regime and measures against these impacts	113
3.3.2	The progress of sedimentation in dam reservoirs and measures against this problem	118
3.3.3	Measures against water temperature and water quality problems in reservoirs	124
3.4	Impacts on habitats of living organisms and measures against these impacts	131
3.4.1	Impacts on the habitats of living organisms by dam projects	131
3.4.2	Social trends concerning natural environment conservation and dam projects	132
3.4.3	Examples of efforts to preserve ecosystems	134
3.5	A reflection of the views of citizens concerning dam projects and an Introduction to the project evaluation system	140
3.5.1	The escalating citizens' movements against dam projects	141
3.5.2	The reflection of citizens' views of dam projects	143
3.5.3	Introduction of the project evaluation system	144

4	Roles of dams: The future	151
4.1	Changes in the social conditions surrounding dams	151
4.1.1	World trends	151
4.1.2	The future of Japan related to dams	154
4.2	Roles of future dams	159
4.2.1	Agriculture and dams	159
4.2.2	Energy and dams	160
4.2.3	Abnormal weather and dams	161
4.3	Future roles of dams	162
4.3.1	Water environments, water cycles, and dams	162
4.3.2	Reservoir areas and dams	163
4.4	Sustainable use of dams so they can continue to fulfill their roles reliably in the future	164
4.4.1	Recognition of the roles of dams in basin societies	164
4.4.2	Maintaining the functions of dam management facilities, etc.	164
4.4.3	Sustained use of dam reservoirs	165
4.4.4	The effective use of existing dams	165
4.5	Roles of people involved in dams	166
4.5.1	Development and refinement of dam technologies	166
4.5.2	Efforts to conduct linked regional activities	167
4.5.3	International technological cooperation among dam engineers	167
4.5.4	Preserving technologies for future generations	168
5	Summation	171
Appendix 1	Outline of the National Administrative Organs of Japan	173
Appendix 2	The basic framework of river management system in Japan	175
Appendix 3	Outline of the existing dams in Japan	181
Appendix 4	Outline of Water Resources Development River Systems and facilities	193
	<i>Colour plates</i>	196
	<i>Location of dams in Japan</i>	209
	<i>Main dimensions of dams</i>	213
	<i>References</i>	219
	<i>Subject index</i>	227

List of Tables

1.2.1	Chronology of Japanese history	3
1.3.1	Top 10 countries by number of large dams	11
2.1.1	Major irrigation ponds constructed by the 15th century	23
2.1.2	Major irrigation ponds constructed from the 16th to the 18th century	24
2.1.3	Large irrigation ponds from the late 19th century to the early 20th century	25
2.1.4	Percentages of irrigation ponds and irrigation dams by the year of construction	28
2.2.1	Municipal waterworks projects around the beginning of the 20th century	34
2.2.2	Number of dams constructed for waterworks, in chronological order	39
2.2.3	Amount of water supplied to waterworks by water sources	40
2.3.1	Oldest hydropower plants in each region	46
2.3.2	Large scale hydropower plants constructed by the beginning of 20th century	47
2.3.3	Hydropower plants representing each region after World War I	50
2.3.4	Hydropower plants representing each region before World War II	51
2.4.1	Initial River Flow Regulation Projects	53
2.4.2	Large-scale hydropower dams in the 1950s	57
2.4.3	Change in development of irrigation water and the number of dams constructed	59
2.4.4	Outline of the five large dams on the Kitakami River System	61
2.4.5	Change in the plan of the Aichi Canal Project	69
2.5.1	Hydropower dams completed around 1960	85
2.5.2	Consistent hydropower development on the Kurobe River	86
2.5.3	Dams for pumped-storage power plant	92
2.5.4	Flood control plan for Class A River Systems with dam projects (86 River Systems)	96
2.5.5	Number of dams constructed and flood control capacity	97
3.2.1	Structure of reservoir area development measures	104

3.2.2	Examples of application to major dams of the Law Concerning Special Measures for Reservoir Area Development	107
3.2.3	Classification of projects and burdens under the Law Concerning Special Measures for Reservoir Area Development (Tedorigawa Dam)	109
3.2.4	Examples of dams that have received location designations under the act on the development of areas adjacent to electric power generating facilities	111
3.4.1	Fishways recently installed at dams in Japan	137
3.5.1	The present project evaluation system of the MLIT (Outline)	146
4.1.1	Comparison of electric power sources	156
A1.1	National Administrative Organs	173
A3.1	Major river systems in Japan	182
A3.2	Number of dams by year of completion	182
A3.3	Number of existing dams by purpose	183
A3.4	Major dams with large reservoir capacity	184
A3.5	Major high concrete gravity dams (PG)	186
A3.6	Major high arch dams (VA)	187
A3.7	Major high concrete hollow gravity dams (HG)	188
A3.8	Major high buttress dams (CB)	189
A3.9	Major high rockfill dams (ER)	190
A3.10	Major high earthfill dams (TE)	191
A3.11	Major high asphalt facing dams (FA)	192

List of Figures

1.1.1	Sayama-ike Dam (TE, 18.5 m, #A): The oldest dam in Japan still in operation	2
1.4.1	Typical precipitation pattern in a year	12
1.4.2	Trend of annual precipitation in Japan	13
1.4.3	Comparison of river slopes in Japan and other countries	13
1.4.4	Concept of water supply function of dam reservoir	14
1.4.5	Utilization of national land – concentration of population and assets on alluvial plains	15
2.1.1	Changes in farm land area and population of Japan	22
2.1.2	Geographical distribution of irrigation ponds	27
2.1.3	Manno-ike Pond	29
2.1.4	Honen-ike Dam	30
2.1.5	Sannokai Dam	32
2.2.1	Changes in waterworks plan for Nagasaki City	35
2.2.2	Hongochi Upper Dam in Nagasaki City	36
2.2.3	Gohonmatsu Dam during its construction	37
2.2.4	Waterworks coverage and number of patients contracting water-borne diseases	38
2.2.5	Population served by waterworks and reservoir capacity for waterworks	40
2.2.6	Commemorative stamp of the Ogochi Dam	41
2.2.7	Expansion of Tokyo Waterworks – change in the population served and water supply capacity in Tokyo Metropolis	42
2.2.8	Served population and waterworks coverage and dam construction in Sapporo City, Hokkaido	43
2.3.1	Changes of electric power production at the early stage	44
2.3.2	A weir at the Koyama Power Plant	46
2.3.3	Ono Dam of the Yatsuzawa Power Plant	48
2.3.4	Transition of maximum electric power demand before World War II	48
2.3.5	Yasuoka Dam	51
2.4.1	Fatalities caused by storms and flood disasters	55
2.4.2	Ikari Dam	55
2.4.3	Ikawa Dam	58

2.4.4	Kitakami River Basin and the five large dams	60
2.4.5	Ishibuchi Dam	61
2.4.6	Change of the agricultural land area on the Isawa Fan	63
2.4.7	Gosho Dam	64
2.4.8	Sakuma Dam	65
2.4.9	Water supply systems in the Tenryu and Higashi-Mikawa Regions	66
2.4.10	Outline of the Aichi Canal Project	68
2.4.11	Makio Dam	70
2.5.1	Change in population of Japan and its concentration in the Pacific Belt Zone	72
2.5.2	Changes in water demand for waterworks and served population in the post-war era	74
2.5.3	Change over the years of ground subsidence at typical observation points	74
2.5.4	Yagisawa Dam	76
2.5.5	Water demand and supply plan in the First Tone River WRDBP	77
2.5.6	Water demand and supply on the Tone and Ara River Systems (municipal and industrial water supply)	78
2.5.7	Replenishment by dams on the Upstream Tone River in 2004	79
2.5.8	Seta River Weir	80
2.5.9	A breakdown of water resources supply (1995)	81
2.5.10	Change in the index of mining and manufacturing production and the quantity of electricity consumption between the end of the War and 1965	82
2.5.11	Change in hydropower generation capacity and its share in the whole generation capacity	84
2.5.12	Okutadami Dam	85
2.5.13	Kurobe Dam	86
2.5.14	Schematic view of hydropower generation on the Kurobe River	87
2.5.15	Change in the capacity of pumped storage power generation	90
2.5.16	Takase Dam	95
2.5.17	Combinations of electric power supplies by the time of day	95
2.5.18	Share of river channels and dams in flood control plan of major rivers	96
2.5.19	Sameura Dam	98
2.5.20	Flood control operation of the Sameura Dam during Typhoon No. 16 in 2004	98
3.2.1	Breakdown of costs for reservoir area development measures by type of project (1998)	108
3.3.1	Sho River Unified Intake Weir	115
3.3.2	Re-regulating river discharge method from the JR Power Plant	116
3.3.3	Schematic diagram of the Tama River and its water use	117
3.3.4	Length of river courses restored from dried up condition under notification (Class A River Systems)	119

3.3.5	Sediment volume and rate by region (2001)	120
3.3.6	Change of sedimentation rate at Yasuoka reservoir	121
3.3.7	Sand flushing at the Dashidaira Dam	123
3.3.8	Outline of the sand bypass tunnel	127
3.3.9	Outline of intake methods	128
3.3.10	Outline of water quality conservation measures at the Miharu Dam	129
3.3.11	Function of reservoir partition fence (with and without)	130
3.3.12	Installation of reservoir partition fence	130
3.4.1	Ecosystem pyramids – the water/material relationship	132
3.4.2	Distribution of total head of fishways	136
3.4.3	Fishway of Nibutani Dam	138
3.4.4	Mangrove forests downstream from the Kanna Dam	138
3.4.5	The changing area of rapids and pools during and after flexible use discharge at the Managawa Dam	140
3.5.1	Nagaragawa Estuary Barrage	141
3.5.2	Evaluation system based on the MLIT Policy Evaluation Basic Plan	145
4.1.1	Predictions of world population	152
4.1.2	Predictions of the future world population and grain production	153
4.1.3	Frequency of concentrated rainfall	157
4.1.4	Frequency of flood control operations is (1991/2004)	158
4.1.5	Estimation of investment demand for maintenance and renewal of public infrastructure	159
4.2.1	Changes in water supply capacity of the Kiso River System	162
4.3.1	Hakusui Dam	163
4.4.1	Proserpina Dam	165
4.5.1	Bronze statue of Hatta Yoichi near the Ushantou Dam	168
A2.1	Typical example of legal procedures for a water use dam	179
